1 Introduction

This Quick Guide will assist you in configuring your TARGIT BI solution. The guide supports TARGIT Decision Suite 2019, Update 4.

It focuses primarily on the subject matter in order to assist you with the specific task at hand. Where applicable, other subjects will be included if they provide specific information that may be of help to you.

This guide is aimed at IT-professionals, Controllers, or others, whose task it is to administer and control the TARGIT BI solution. It is assumed that you are familiar with and have a general knowledge of Windows standard components.

1.1 Guide design

Notes, tips, and examples are included where applicable, these are visually displayed in boxes as depicted below:

> **Note:** A note box provides specific information on the task at hand. Pay attention to the information in this box.

> **Example:** An example box will provide an example of how to solve the task at hand.

> **Tip:** A tip box will provide you with e.g. an alternative approach to the task at hand. Ignoring a tip will not have any consequences, but you might miss out on a trick that makes your task easier.

2 Open files using command line parameters

You can use command line parameters to open/run e.g. a slide show. It is possible to open/run files located on the TARGIT Server from all computers where the Client Installer is installed.

Tip: Use the TARGIT.exe file in the Client Installer when addressing the Windows client.

Below you will find some examples on how you can open or run files:

Example: Open the analysis named 'Products' located in the 'Global' VFS folder:

"C:\Program Files (x86)\TARGIT\Client Installer\TARGIT.exe" vfs://Global/Products.xview

Example: Run the slide show named 'Test' located in the 'Global' VFS folder:

"C:\Program Files (x86)\TARGIT\Client Installer\TARGIT.exe" vfs://Global/Test.slideshow

Example: Using the '-server' command to open the slide show above on another computer:

"C:\Program Files (x86)\TARGIT\Client Installer\TARGIT.exe" -server=[TARGITservername or IP address] vfs://Global/Test.slideshow

Note: Observe the " characters in the examples above, these are needed if you have spaces in your string, e.g. if your analysis is named 'Product overview' you need to use the " character before and after the string like this: "vfs://Global/Product overview.xview".
